# We Rate Dog Project (Analysis from Twitter Data)

WeRateDogs(https://twitter.com/dog_rates) is a Twitter account that rates people's dogs with a humorous comment about the dog. The goal of this project is wrangling WeRateDogs Twitter data to create interesting and trustworthy analyses and visualizations.

From the data we cleaned up through data wrangling procedure, we get several insights.
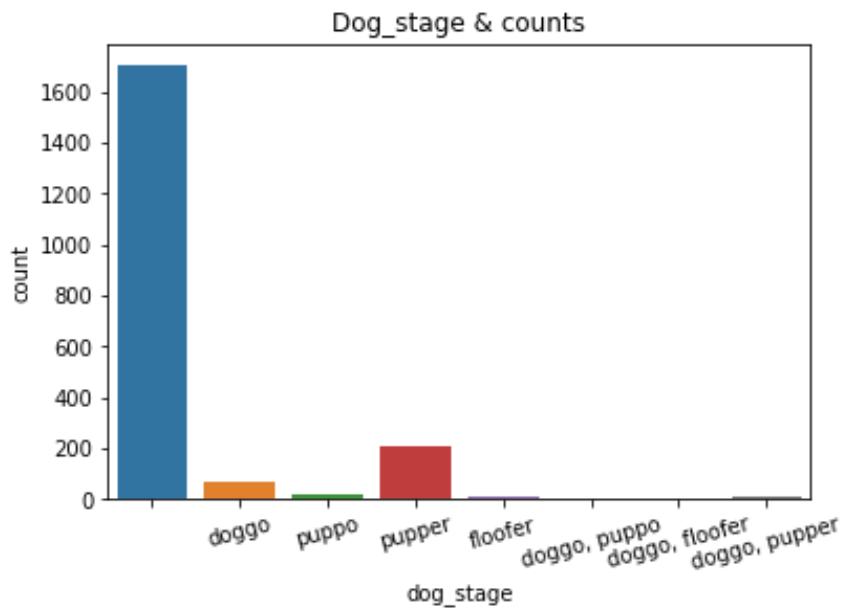

1. Retweets and Favorites have similar distribution, and are correlated. We can easily assume that people who likes specific post or account will be more likely retweet those.

2. The most frequently set rating is 12 and majority of people set rating between 7 to 14.

3. Majority of tweets are not recognized with specific dog_stage. Among specified dog stage pupper has the largest number.

4. Please find posting example of pupper whose rating is 10.
